

Energy Supplement for Dairy Cows

**85%
Pure Fat**

Non GMO

**Trans Fat
Free**

NURISOL consists of calcium salts of long chain fatty acids, made from freshly processed palm fatty acid distillate reacted with calcium. With high energy content, rumen by-pass qualities and high digestibility in the small intestine it is an excellent supplement for dairy cattle.

NURISOL is specifically tailor made for ruminants where there is a requirement for high energy and nutrition supplementation. It is recommended for use during lactation in high producing dairy cows, recovery to health for recently calved cows, and also in the promotion of growth in young animals without interfering with rumen microbial activities.

NURISOL stays inert in the rumen, and then passes on to the abomasums where the relatively acidic condition there will naturally break down the calcium bonding and allow for optimal intestinal digestion and absorption. The calcium bonding with fatty acids prevents the product from being reacted upon by the rumen bacteria thereby providing the crucial "rumen by-pass" or "rumen inertness".
